THE MAKING OF 'LOTUS'

Roderick Vos | Designer LOTUS

www.rb73.nl

LOTUS

A cast aluminum 'object' and fire bowl.

Lotus has a basic shape that is repeated three times, with a total diameter of 100 cm.

Due to the simplicity in design, the function of the "object" is immediately recognized.

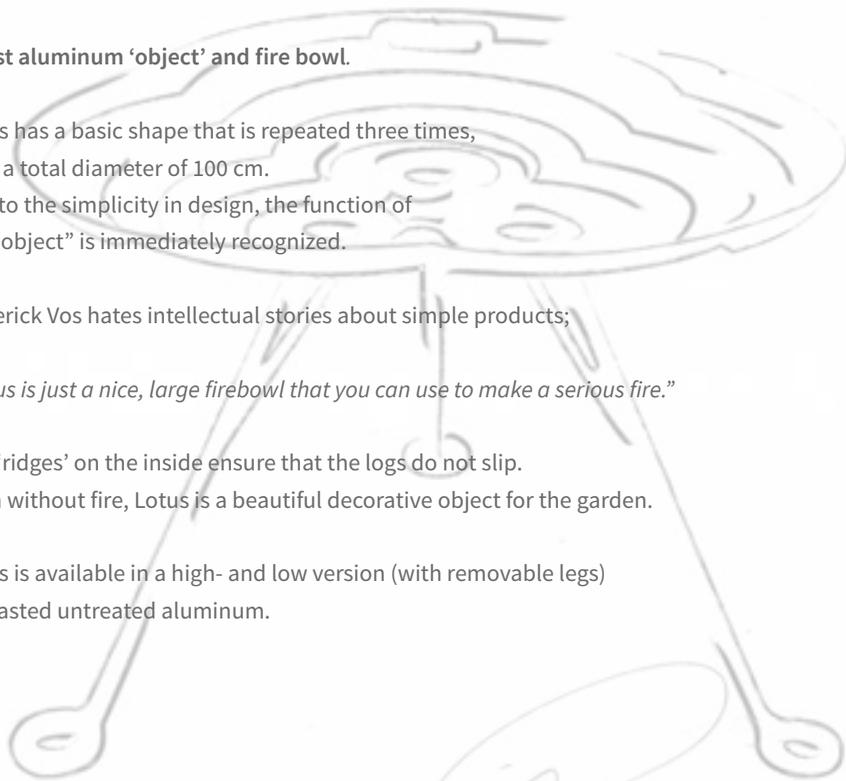

Roderick Vos hates intellectual stories about simple products;

"Lotus is just a nice, large firebowl that you can use to make a serious fire."

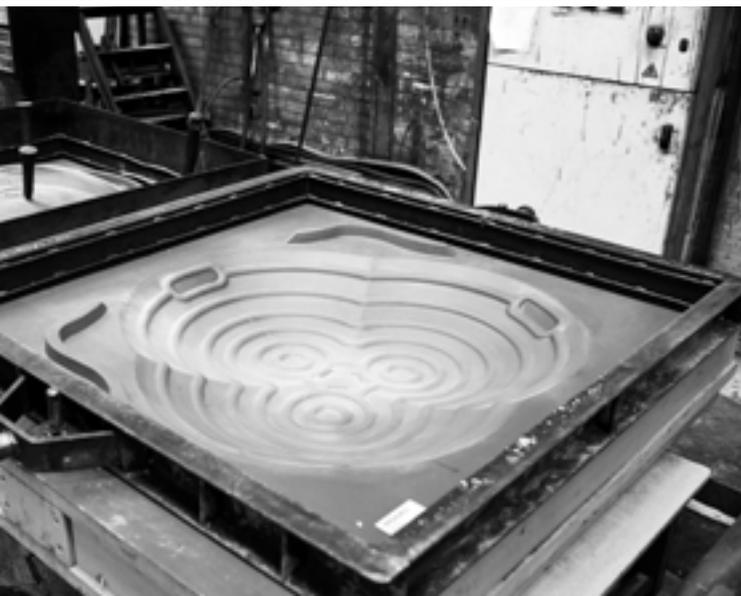

The 'ridges' on the inside ensure that the logs do not slip.

Even without fire, Lotus is a beautiful decorative object for the garden.

Lotus is available in a high- and low version (with removable legs) in blasted untreated aluminum.

Roderick Vos

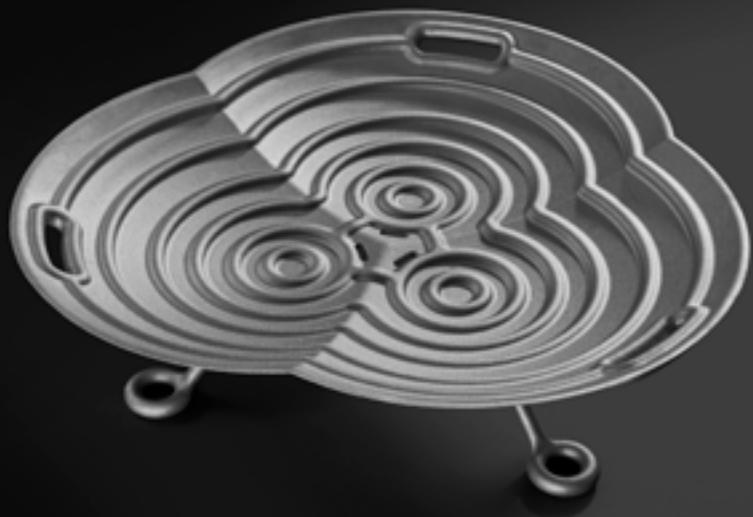

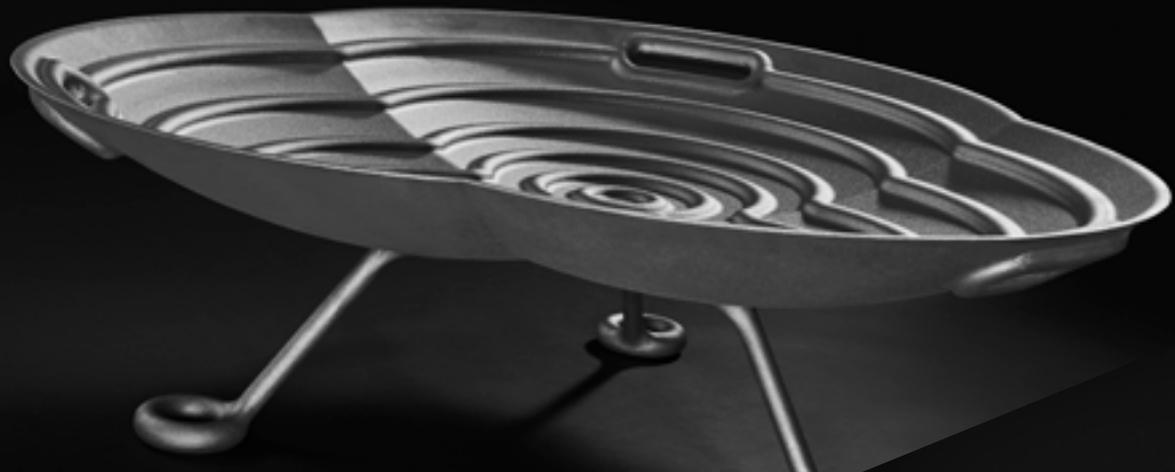

Material: sandblasted untreated cast aluminum

Lotus Low weight: 22 kg

Lotus High weight: 25 kg
